Articles

Haar Type Orthonormal Wavelet Bases in R2 1
Jeffrey C. Lagarias and Yang Wang

On the Reproducing Formula of Calderon 15
Sadahiro Saeki

Nonlinear Approximation by Trigonometric Sums 29
R. A. DeVore and V. N. Temlyakov

Fourier Inequalities and Moment Subspaces in Weighted Lebesgue Spaces 49
C. Carton-Lebrun

On Decomposition Theorems for Hardy Spaces on Domains in $\mathbb{C}^n$ and Applications 65
Steven G. Krantz and Song-Ying Li

Aim and Scope

The Journal of Fourier Analysis and Applications will publish results in Fourier analysis, as well as applicable mathematics having a significant Fourier analytic component. Appropriate manuscripts at the highest research level will be accepted for publication. Because of the extensive, intricate, and fundamental relationships between Fourier analysis and so many other subjects, select and readable surveys will be published in each issue. These surveys will include historical articles, research tutorials, and expositions of specific topics.

The Journal of Fourier Analysis and Applications will provide a perspective and means for centralizing and disseminating new information from the vantage point of Fourier analysis. The breadth of Fourier analysis and diversity of its applicability require that each paper should contain a clear and motivated introduction, which is accessible to all of our readers.

Applications include the following topics:

Antenna theory
Coding theory
Crystallography
Fast algorithms
Gabor theory and applications
Image processing
Mathematics of material behavior
Number theory
Optics
Partial differential equations
Potential theory
Prediction theory
Radar applications
Sampling theory
Spectral estimation
Speech processing
Stochastic processes
Time-frequency analysis
Time series
Tomography
Turbulence
Uncertainty principles
Waveletpackets
Wavelet theory and applications
