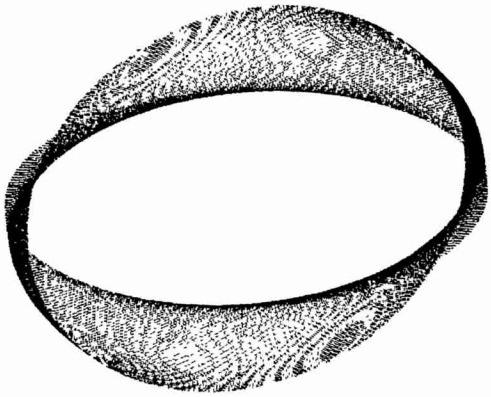

Fig. 2. The same trajectory of U_λ for $\lambda = 0.7$. Only the part of the trajectory has been plotted, for which $\theta \in [0, 1.36345)$

of two perfect circles. As a result, the projection on the two-dimensional plane should yield a union of two perfect ellipses. Figure 2 illustrates this approach.

Acknowledgements. I express my gratitude to T. Spencer for suggesting the problem and patience, while listening to the early versions of the results. Also, I would like to thank other members and staff of the Institute of Advanced Study for creating a perfect atmosphere for work. Finally, I thank the National Science Foundation for providing financial support during my stay at the Institute for Advanced Study (grant number DMS-860 1978).
