NEW PROBLEMS IN LIBRARY ARCHITECTURE - LIBER SEMINAR, HEIDELBERG, NOVEMBER 24th-26th,1980

Within the past few decades numerous new libraries have been constructed. These are mostly buildings designed with portable wall construction which provide easy access to book and reading areas, air-conditioned because of their size. The question now arises whether library buildings if this kind should be built in the future, with decreasing student enrollment and increasing energy costs.

On the basis of expert reports dealing with past experiences the Liber Seminar on new problems in library architecture has tried to work out the fundamentals of an architectural concept applicable to library purposes of the future. Not only new buildings but also ideas and plans for the regeneration and the expansion of older library buildings, have been treated.

The agenda of the seminar, arranged by Dr. Mittler, Librarian of the University at Heidelberg, was as follows:

G. Liebers :	Introduction
B. Fabian :	New library buildings and the user
Eröffnung der Ausstellung :	Deutscher Bibliotheksbau im letzten Jahrzehnt
R. Fuhlrott:	Die Entwicklung des Bibliotheksbaus seit 1905
Discussion panel :	Die Reorganisation des Gebäudes der Universitäts-bibliothek Heidelberg
Faulkner-Brown :	Experiences with new British library buildings
J. Bléton :	La construction de bibliothèque d'études en France
F. Kroller :	The energy conservation in library buildings
M.A. Pegg :	Security systems in open access libraries
E. Geiss :	La Bibliothèque nationale et universitaire de Strasbourg. Les bâtiments anciennes et les nouveaux contructions
R. Mathys :	Die Planung des Erweiterungsbaus der Zentral-bibliothek Zürich
U. Hempel :	Auswirkungen von Organisation und Betrieb einer wissenschaftlichen Bibliothek auf das Gebäude

The lectures will be published in LIBER BULLETIN.
