Formula (14) is not as formidable as its appearance may suggest; it is particularly applicable for large values of n while the more elegant formula (13) is suitable for smaller values of n , say $n \leq 30$. Note the close relation between X and Y . Also observe that

$$B = A + \begin{cases} 0 & \text{if } \lfloor n/3 \rfloor \text{ is even,} \\ 1 & \text{if } \lfloor n/3 \rfloor \text{ is odd.} \end{cases}$$
