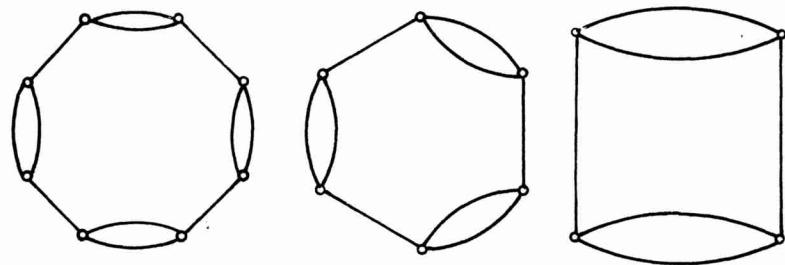

Fig. 11.

**Theorem.** Let  $G$  be a finite planar connected vertex-transitive graph of the regularity degree three. Then  $G$  is isomorphic to one of the following graphs: the graph consisting of two vertices joined by three edges; the graph of the regular tetrahedron; the graph of the regular dodecahedron; the graph of an  $n$ -side prisma for  $n \geq 2$ ; some of the graphs in Figs. 4–11.
