Proof. The hypotheses of Corollary 1 are satisfied by choosing C as in (ii).

(A₃) Consider the equation

$$(9) \quad x'' + x'(1 - x^2) - x = \mu p(t),$$

where $p(t)$ is continuous in t . If $K < -\frac{1}{2}$ and if $p(t)$ is periodic of period w then (9) has a w -periodic solution.

Proof. If $0 < C \leq 1$, $0 < \varepsilon < 1/\sqrt{|K|}$, and $|\mu| \leq (1 - \varepsilon(\sqrt{|K|})) C/B$, where $B = \max_{t \in [0, w]} |p(t)|$, then by Corollary 1 (9) has a w -periodic solution.
