Contents

Old Friends Revisited: the Multifractal Nature of Some Classical Functions **1**
Stéphane Jaffard

Smoothing Minimally Supported Frequency Wavelets: Part II **23**
Eugenio Hernández, Xihua Wang, and Guido Weiss

Prediction for Two Processes and the Nehari Problem **43**
I. Gohberg and H. J. Landau

Unique Reconstruction of Band-limited Signals by a Mallat-Zhong Wavelet Transform Algorithm **63**
C. J. Kicey and C. J. Lennard

Integral Self-Affine Tiles in $\mathbb{R}^n$
Part II: Lattice Tilings **83**
Jeffery C. Lagarias and Yang Wang

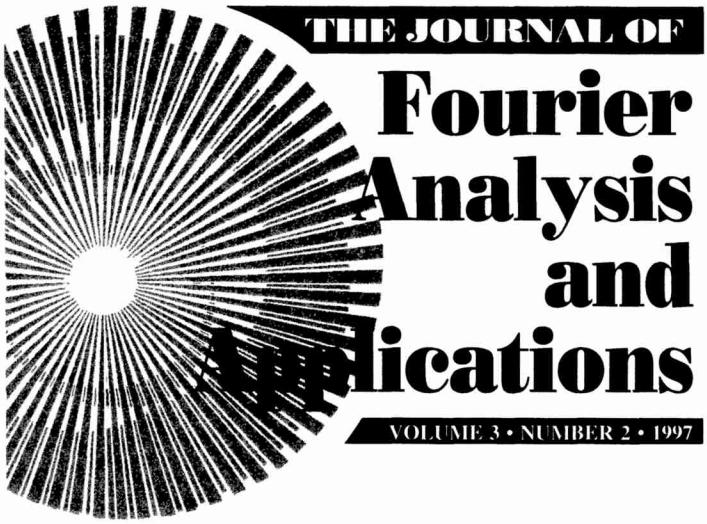
Aim and Scope

The Journal of Fourier Analysis and Applications will publish results in Fourier analysis, as well as applicable mathematics having a significant Fourier analytic component. Appropriate manuscripts at the highest research level will be accepted for publication. Because of the extensive, intricate, and fundamental relationships between Fourier analysis and so many other subjects, select and readable surveys will be published in each issue. These surveys will include historical articles, research tutorials, and expositions of specific topics.

The Journal of Fourier Analysis and Applications will provide a perspective and means for centralizing and disseminating new information from the vantage point of Fourier analysis. The breadth of Fourier analysis and diversity of its applicability require that each paper should contain a clear and motivated introduction, which is accessible to all of our readers.

Applications include the following topics:

Antenna theory
Coding theory
Crystallography
Fast algorithms
Gabor theory and applications
Image processing
Mathematics of material behavior
Number theory
Optics
Partial differential equations
Potential theory
Prediction theory
Radar applications
Sampling theory
Spectral estimation
Speech processing
Stochastic processes
Time-frequency analysis
Time series
Tomography
Turbulence
Uncertainty principles
Waveletpackets
Wavelet theory and applications



Contents

The Banach Algebra A* and Its Properties **103**
E. S. Belinskii, E. R. Liflyand, and R. M. Trigub

Vector Potential Theory on Nonsmooth Domains in R^3 and Applications to Electromagnetic Scattering **131**
Dorina Mitrea, Marius Mitrea, and Jill Pipher

Pseudodifferential Operators on *SU*(2) **193**
Frank Geshwind and Nets Hawk Katz

Aim and Scope

The Journal of Fourier Analysis and Applications will publish results in Fourier analysis, as well as applicable mathematics having a significant Fourier analytic component. Appropriate manuscripts at the highest research level will be accepted for publication. Because of the extensive, intricate, and fundamental relationships between Fourier analysis and so many other subjects, select and readable surveys will be published in each issue. These surveys will include historical articles, research tutorials, and expositions of specific topics.

The Journal of Fourier Analysis and Applications will provide a perspective and means for centralizing and disseminating new information from the vantage point of Fourier analysis. Radar applications
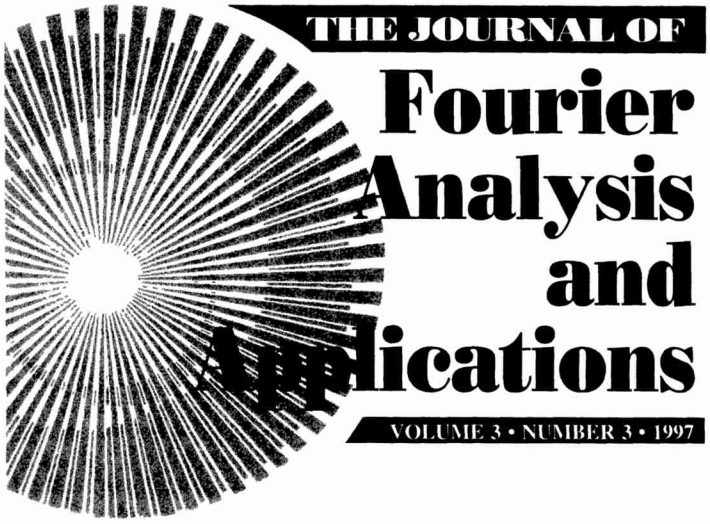
Sampling theory
Spectral estimation
Speech processing
Stochastic processes
Time-frequency analysis
Time series
Tomography
Turbulence
Uncertainty principles
Waveletpackets
Wavelet theory and applications



Contents

Research Tutorial

The Uncertainty Principle: A Mathematical Survey **207**
Gerald B. Folland and Alladi Sitaram

Articles

Wavelet Basis Packets and Wavelet Frame Packets **239**
Ruilin Long and Wen Chen

Finite Orthogonal Transforms and Multiresolution Analyses on Intervals **257**
W. R. Madych

Regularity of Refinable Function Vectors **295**
Albert Cohen, Ingrid Daubechies, and Gerlind Plonka

Aim and Scope

The Journal of Fourier Analysis and Applications will publish results in Fourier analysis, as well as applicable mathematics having a significant Fourier analytic component. Appropriate manuscripts at the highest research level will be accepted for publication. Because of the extensive, intricate, and fundamental relationships between Fourier analysis and so many other subjects, select and readable surveys will be published in each issue. These surveys will include historical articles, research tutorials, and expositions of specific topics.

The Journal of Fourier Analysis and Applications will provide a perspective and means for centralizing and disseminating new information from the vantage point of Fourier analysis. Applications include the following topics:

Antenna theory
Coding theory
Crystallography
Fast algorithms
Gabor theory and applications
Image processing
Mathematics of material behavior
Number theory
Optics
Partial differential equations
Potential theory
Prediction theory
Radar applications
Sampling theory
Spectral estimation
Speech processing
Stochastic processes
Time-frequency analysis
Time series
Tomography
Turbulence
Uncertainty principles
Waveletpackets
Wavelet theory and applications

Contents

Research Tutorial

A Direct Approach to the Mellin Transform **325**
Paul L. Butzer and Stefan Jansche

Articles

On the Pseudodilation Representations of Flornes, Grossman, Holschneider, and Torresani **377**
Carolyn P. Johnston

Piecewise Linear Wavelets on Sierpinski Gasket Type Fractals **387**
Robert S. Strichartz

Local Well-Posedness for Higher Order Nonlinear Dispersive Systems **417**
Carlos E. Kenig and Gigliola Staffilani

A Discrete Wavelet Transform Without Edge Effects Using Wavelet Extrapolation **435**
John R. Williams and Kevin Amaratunga

Wavelet Sets in $\mathbb{R}^n$ **451**
Xingde Dai, David R. Larson, and Darrin M. Speegle

A New Class of Unbalanced Haar Wavelets That Form an Unconditional Basis for L_p on General Measure Spaces **457**
Maria Girardi and Wim Sweldens

$L^p - L^q$ Estimates for Convolution Operators with n-Dimensional Singular Measures **475**
E. Ferreyra, T. Godoy, and U. Urciuolo

Aim and Scope

The Journal of Fourier Analysis and Applications will publish results in Fourier analysis, as well as applicable mathematics having a significant Fourier analytic component. Appropriate manuscripts at the highest research level will be accepted for publication. Optics
Partial differential equations
Potential theory
Prediction theory
Radar applications
Sampling theory
Spectral estimation
Speech processing
Stochastic processes
Time-frequency analysis
Time series
Tomography
Turbulence
Uncertainty principles
Waveletpackets
Wavelet theory and applications

Contents

From the Original Framer to Present-Day Time-Frequency and Time-Scale Frames **485**
Ingrid Daubechies

On Dualizing a Multivariable Poisson Summation Formula **487**
Richard J. Duffin and Hans F. Weinberger

Stability Theorems for Fourier Frames and Wavelet Riesz Bases **499**
Radu Balan

Sampling Multipliers and The Poisson Summation Formula **505**
John J. Benedetto and Georg Zimmerman

Tight Frames of Multidimensional Wavelets **525**
Marcin Bownik

Perturbation of Operators and Applications to Frame Theory **543**
Peter G. Cazassa and Ole Christensen

Characterization of Biothogonal Cosine Wavelets **559**
Charles K. Chui and Xianliang Shi

On a Theorem of Ingham **577**
Stéphane Jaffard, Marius Tucsnak, and Enrique Zuazua

From Continuous to Discrete Weyl-Heisenberg Frames Through Sampling **583**
A. J. E. M. Janssen

Sampling and Interpolating Sequences for Multiband-Limited Functions and Exponential Bases on Disconnected Sets **597**
Yurii I. Lyubarskii and Kristian Seip

Affine Systems in $L_2(\mathbb{R}^d)$ II: Dual Systems **617**
Amos Ron and Zuowei Shen

Interpolation and Frames in Certain Banach Spaces of Entire Functions **639**
Robert M. Young

Aim and Scope

Sampling theory
Spectral estimation
Speech processing
Stochastic processes
Time-frequency analysis
Time series
Tomography
Turbulence
Uncertainty principles
Waveletpackets
Wavelet theory and applications

Contents

Pointwise Fourier Inversion: a Wave Equation Approach **647**
Mark A. Pinsky and Michael E. Taylor

Jacobi Polynomial Estimates and Fourier-Laplace Convergence **705**
Gavin Brown and Kunyang Wang

Multilevel Decompositions of Functional Spaces **715**
Claudio Canuto and Anita Tabacco

Sharp Estimates for Commutators of Singular Integrals via Iterations of the Hardy-Littlewood Maximal Function **743**
Carlos Pérez

Stability and Independence of the Shifts of Finitely Many Refinable Functions **757**
Thomas A. Hogan

Aim and Scope

The Journal of Fourier Analysis and Applications will publish results in Fourier analysis, as well as applicable mathematics having a significant Fourier analytic component. Appropriate manuscripts at the highest research level will be accepted for publication.
